

**Supplementary Figure S1.** Probability of survival based on HOTAIR expression in TCGA cohort of GC patients. (A) All GC patients (n=611, p=0.21). (B) Lauren’s intestinal type GC patients, HOTAIR-positive patients are divided into two groups by mean of expression level (n=257, p=0.73). (C) Lauren’s diffuse type GC patients (n=233, p=0.0032). Survival data were performed using Kaplan-Meier Plotter analysis tool (<http://kmplot.com/analysis/>).
